(54) OBJECTIVE LENS DRIVE DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain an objective lens drive device stably supplying a current to a tilting coil tilting/driving an objective lens and hardly displacing a light spot position on an optical disk recording surface even when the objective lens is tilted in the optical disk radial direction.

SOLUTION: The objective lens drive device is constituted so that a movable part arranged with the objective lens 1 is supported with six pieces of conductive elastic support members 8, and by arranging four pieces of the conductive elastic support members on the optical disk side in the optical axial direction of the objective lens 1, and arranging two pieces of them on the opposite side, a support central position P is brought near to the main point position S of the objective lens 1.
